STEM EXPORTING GUIDE FOR MUSIC PRODUCTION

1 FL STUDIO WORKFLOW

Prepare tracks in FL Studio by assigning each to its own mixer track and naming clearly. Export using the Split Mixer Tracks option for separate files.

2 ABLETON LIVE WORKFLOW

In Ableton Live, select tracks and apply effects. Export individual tracks at 24-bit and 48kHz sample rate for best quality.

3 PRO TOOLS WORKFLOW

Organize and group tracks in Pro Tools. Bounce to disk with consistent settings to ensure all tracks are properly processed.
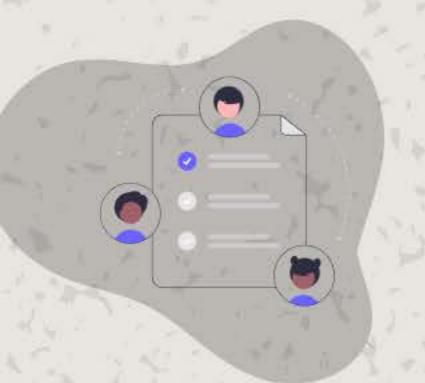

4 PRO TIPS FOR EXPORTING STEMS

Use 24-bit depth for high-quality audio. Maintain naming conventions, double-check exports, and consider backing up your project.

5 ORGANIZING AND DELIVERING STEMS

Save exported files in a well-organized 'Stems' folder. Label folders with project information for easy access during collaboration.
